

## DISCOVERY IMAGING SYSTEM

### "Vehicle Mount Utility Locator & A Boat Underwater Detector"

The Underground Surveyor Apparatus (USA) "Discovery" is a state of the art 8 Sensor Unit that is well suited for both the utility locator as well as the professional treasure hunter. It was tested as a vehicle mount utility locator and as a underwater boat detector. See the field tests links on this page.

It has advanced software which makes operating the unit and data analysis much simpler than other brands available. The software renders a 3D representation of the surveyed magnetic field. Check out our other USA units [here](#).
